Template Applications – Consent for Non-Routine Healthcare

Introduction

This application consists of three pages to manage consent for non-routine healthcare, generally in a Department of Children and Family Services environment. However, it could be adapted for other similar environments too.

The first two pages capture the data needed to make the request, and the third is for approval.

Template Applications – Consent for Non-Routine Healthcare

Workflow Logic

The subject's social worker will be the first asked to consent, followed by their supervisor and finally their director.
Any of the three decision-makers may deny consent.

Notable Behaviors

When the decision-makers' names are entered or modified on the first page, they are copied into the headers on the approval page using the Set Property command.

Installation Instructions

Stakeholders' e-mail addresses are collected in the application; no changes need to be made after the app has been imported and published in your account.

The graphic Header is included as a picture on the first page and is easy to remove. Alternatively, there is space on either side of the image for your logo or address.
